

BUSINESS PROBLEM STATEMENT

Current Situation

Airport operations teams primarily rely on historical reports and manual monitoring systems. As a result, disruptions are often identified only after delays and congestion have already impacted operations.

Challenges

- Reactive disruption management
- Limited visibility into cascading delays
- Inability to forecast operational risks
- Lack of automated recommendations
- Delayed decision-making

Business Impact

Operational disruptions can result in:

- Increased fuel consumption
- Crew overtime expenses
- Passenger dissatisfaction
- Reduced airport efficiency
- Airline operational losses

Proposed Solution

AeroMind will provide an AI-powered Airport Disruption Command Center capable of:

- Predicting disruption risks
- Identifying root causes
- Forecasting congestion patterns
- Detecting anomalies
- Generating executive summaries
- Recommending corrective actions

Expected Benefits

- Faster operational response
- Reduced disruption impact
- Improved airport efficiency
- Enhanced decision-making
- Better resource planning
